Dear Hiring Manager,

I am confident that I can fit best for the profile Software Developer or Data Analyst due to my previous work experience as well as my relevant courses part of the curriculum, which makes me capable of handling challenging, innovative and rewarding assignments.

I have been working on projects in my previous organizations that are inclined to Software Development, Data Science and Operational Excellence by leveraging the knowledge of data visualizing, mining and backend infrastructure.

I am positive about delivering viable positive solutions and drive results due to my aptitude and collaborative teamwork by providing valuable insights to the team building software using Java and front end web applications using JS, HTML, CSS and a bunch of exciting tools. I am excited to develop, implement and test responsive, scalable components for web applications that allow clients to launch new campaigns, analyze their performance, and manage audience data.

My prior knowledge on software development makes me attracted to this profile. I feel, I would be able to well organize and adapt to the challenging priorities and gradually see myself towards my fulfillment as a full stack developer.

My extensive experience that I gained through the role of Data Analyst and Computer Teacher along with core software development over the last few years have made me confident of the industry standards as well as the changing technologies to match up the market trends and best practices. To be part of your team in Canada is truly exciting and looking forward to work in a team of highly motivated and talented professionals.

I appreciate a positive response from your side and discuss about how I can contribute to this new role.

Yours sincerely,

Rishabh Garhewal
